Posted on the Wells New page on Facebook & a mass text/email was sent out.

The elevated tank is now full, customers that have not already flushed their lines may do so now.

To keep flushing from draining the elevated tank please use the following instructions when flushing.

If you have an outside faucet turn this on and let it run for 5-10 minutes. If you do not have an outside faucet turn on your shower and let it run until the water is clear.

Turn on your inside faucets and let it run for 5-10 minutes.

To flush your water heater, connect a water hose to your bottom drain and let run until the water runs clear, usually around 5-10 minutes. If you have a tankless water heater turn on your shower and let it run until the water is clear.

Cloudy water means there is air in the main lines, this will clear up in time and does not mean that there is anything wrong with the water.

All customers will remain on a boil water advisory notice until the operator cancels the notice.
